DETAILED ACTION

Allowable Subject Matter

1. Claims 1-25 are allowable over the prior art of record.

The following is an examiner's statement of reasons for allowance: The prior art of record fails to teach or render obvious a threshold voltage stabilizer for use with a MOS transistor having a body effect, a method of manufacturing thereof, and an integrated circuit comprising a threshold voltage stabilizer with all exclusive limitations as recited in claims 1, 10, and 18, comprising a body well in a substrate, a source in the body well, and a stabilization region below the body well, the threshold voltage stabilizer being configured to provide a stabilization voltage to the stabilization region to increase a depletion region within the body well thereby restricting the body effect to stabilize a threshold voltage of the MOS transistor.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Copies of the references are not being furnished with this Office Action per MPEP § 707.05(a).

Art Unit: 2818

a) U.S. Patent 5,894,145 to Chen et al. discloses a dynamic random access memory (DRAM) device having separate bias voltages for the memory area, the peripheral area, and the I/O area of the DRAM device.

b) U.S. Patent 6,507,235 to Sher discloses an integrated circuit having a local charge pumping circuit used to produce a first voltage in a localized region of a doped substrate and a global charge pumping circuit used to produce a second voltage in all other portions of the substrate outside of the localized region.
